
TRINITY FLUIDS

Designed for Quality, Value and Professionals

All Trinity Fluids, LLC brands are designed to promote positive results, if used properly. You can choose to not deviate from our instructions or you can experiment with it based on your level of experience and desired personal look and feel of the finished product.

The mixing instructions will give the embalmer a guarantee of a successful process.

SF Edema Fluid mixing instruction

- **Do not mix with water.** Begin process by injecting 16-20 ounces of fluid under a low flow rate and low pressure setting. If body still shows signs of excess fluids inject a second 16 ounces of fluid. Extreme cases may require a third injection.
- Do not use as an arterial preservation fluid. This product is designed for **flushing the excess water from the tissues.**
- For lesser cases you may use as a co-injection with the AF series. 8 ounces to 10 ounces per tank of mixed solution.
